THEXRA ENTERPRISE SOLUTION PROPOSAL

13-Section Formal AI Solution Brief

Date: 07/10/2026
Status: Approved Proposal

1. Executive Summary

> This enterprise solution addresses Stakeholders and the public struggle to comprehend spatial impacts, zoning scale, and community disruption when evaluating complex civil infrastructure projects solely through static 2D blueprints.. By deploying AR — THEXRA View, the client will achieve immediate workflow optimization, enhanced spatial visual analytics, and scalable long-term digital conversion.

2. Client Challenge

Stakeholders and the public struggle to comprehend spatial impacts, zoning scale, and community disruption when evaluating complex civil infrastructure projects solely through static 2D blueprints.

3. Project Objective

> **Primary Goal:** Transition zoning reviews to an interactive 3D spatial visualization format to accelerate public approval cycles and improve stakeholder consensus.
> **Target KPIs:**
> - Reduce processing latency by 35%
> - Improve spatial user adoption to 90%+

4. Proposed Solution

An augmented reality visualization platform that transforms 2D CAD blueprints and GIS data into interactive 3D civil infrastructure overlays for public zoning sessions.

IMPLEMENTATION PHASING:

1. Phase 1: Discovery & Baseline Sync
2. Phase 2: Core Platform Pilot
3. Phase 3: Production Go-Live

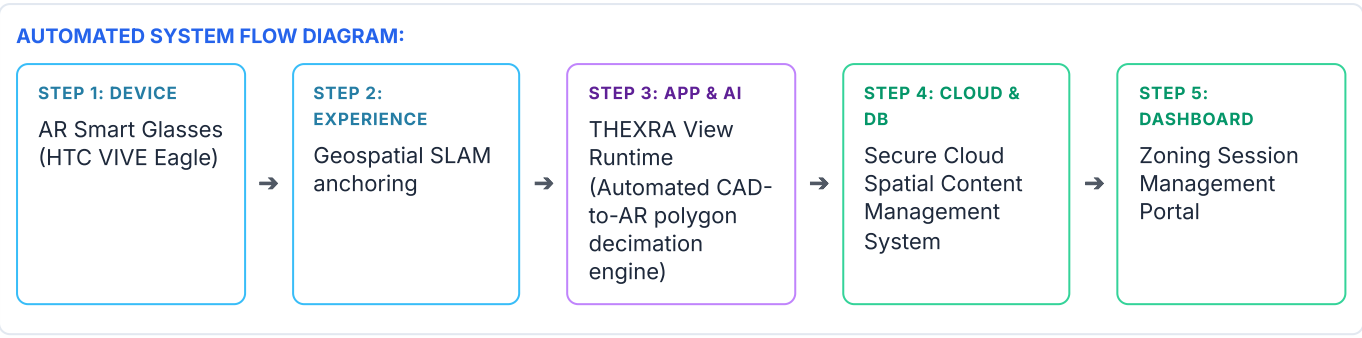

5. User Experience & Journey

Target Users: Municipal zoning board members, urban planners, civil engineers, and public community stakeholders.

Workflow: Urban planners upload civil schematics to THEXRA View, launch multi-user review sessions on tablets or smart glasses, and guide stakeholders through interactive 3D infrastructure overlays with real-time zoning impact filters.

6. Solution Architecture

AR — THEXRA View

Hardware: AR Smart Glasses (HTC VIVE Eagle), Enterprise Tablets (iPad Pro with LiDAR)

Software: THEXRA View Runtime, THEXRA Make Content Authoring Tool

AI Components: Automated CAD-to-AR polygon decimation engine, Spatial landmark alignment computer vision

XR Components: Geospatial SLAM anchoring, Multi-user shared spatial coordinate synchronization

Backend: Secure Cloud Spatial Content Management System, Role-based project access gateway

Dashboard: Zoning Session Management Portal, Stakeholder Feedback & Telemetry Console

Data Flow: BIM/GIS Repositories → THEXRA Make Optimization Pipeline → Secure Cloud Host → THEXRA View on AR Devices

7. Scope of Work (SOW)

Project Scope: Delivery of an AR-driven civil infrastructure review solution leveraging THEXRA View to modernize public zoning reviews and blueprint visualization.

Core Features: Dynamic 3D model slicing and elevation viewing, Multi-layer zoning toggles (utilities, traffic, building height), Multi-user shared spatial alignment for town hall meetings, LiDAR-based physical table anchor alignment

Exclusions: Creation of primary architectural CAD blueprints from scratch, Physical renovation or audiovisual rewiring of council chambers, Public legal compliance certifications

8. Deliverables

Optimized 3D digital asset library of civil infrastructure blueprints • Configured THEXRA View enterprise application • Zoning facilitator administrative manual • Testing and calibration documentation

9. Implementation Plan

1. **Discovery** (2 weeks):Blueprint data audit report • System architecture specification
2. **Design** (2 weeks):User interface mockups • Spatial interaction model guide
3. **Prototype** (3 weeks):Interactive 3D model prototype • Proof-of-concept validation report
4. **Development** (5 weeks):Configured THEXRA View build • BIM optimization pipeline
5. **Testing** (2 weeks):Hardware calibration report • User acceptance sign-off
6. **Deployment** (2 weeks):Production release • Zoning board operational playbook
7. **Support** (Ongoing):SLA maintenance plan • Quarterly platform updates

10. Timeline & Delivery Target

Target Horizon: 6-8 Weeks Deployment Target

11. Assumptions & Prerequisites

- Technical Prerequisite: API access provided by client IT team
- Operational Prerequisite: Facility network connectivity enabled

12. Optional Add-ons & Phase 2 Upsells

- Expansion Option 1: Multi-site expansion package
- Expansion Option 2: Advanced predictive AI analytics integration

13. Next Steps & Scoping Workshop

Conduct a technical ingestion audit of existing civil CAD/BIM blueprints and schedule a live AR projection proof-of-concept.
